

Include msinfo32.nfo file in the ziplogs file

There's currently a documented switch for the tsm maintenance ziplogs command that is supposed to generate and include the msinfo32 file with system information.

It appears this file is successfully generated in the temp directory (e.g. D:\Tableau\Tableau Server\data\tabsvc\temp\tabadminagent_0.20191.19.0215.0259), but is not actually included in the ziplogs file.

Please include it, like how netstat-info is included!
