

Tableau Prep: Add ability to specify date format of data source (just like in desktop)

Hi,

This also relates to another idea: [Allow formatting of numeric and date fields for display purposes](#)

The problems I was having would also have been fixed by implementing a feature I just discovered in desktop, namely [Date Properties for a Data Source](#).

I would have saved a great deal of time if I had just been able to tell Prep that my data source uses the international standard date format and not the US one.

Could this same feature be implemented in Prep?

Thank you,

Tim
