

# Export CSV Similar to PDF

---

Hello All,

In a lot of cases we are displaying multiple sheets from a dashboard and there are buttons using which user can export data to JPG, PDF and CSV. The JPG & PDF works really well but when for the csv export the user has to first select a sheet / plot for the data to be shown in an export popup.

If the user does not select / interact with a sheet and directly clicks exports to CSV button the popup shows blank data. Would there be a way in which you can show a popup similar to when we do PDF export where we list sheets which user can export. Please find the attached image as a reference.

Thanks.
