Overlay multiple maps into a single map view on a Dashboard

Include a map grouping box tool on the Dashboard (similar to horizontal and vertical group box) that allows multiple maps to be overlayed on top of one another. Synchronize the zoom level for all and provide a way to "turn on/off" the various layers/maps in the overlay.

Actions can work normally by providing filtering based on the rules regarding treatment of each of the individual worksheet maps. You could turn off or suppress the background map for all but one of the maps and set it behind all the other maps.
