

Allow parameters in Axis Titles, Legends, etc.

I would like have parameters be able to be entered into Axis Titles, Legends, etc. so that when I have a parameter that swaps out my measures I can see the parameter value on the axis and in the legend.

This stems from personal experience and forum posts like the following: <http://community.tableausoftware.com/thread/124800>

I think this would be a fantastic addition to the functionality of parameters.

Comments?

Dan
