

# Tableau Server Subscriptions: Add size (x by y) and PDF option

---

The image sent with a subscription in Tableau 8 Server is a great first start, but alas the image is always of poor resolution when the dashboard is set to Automatic. It would be much better to be able to specify an image size (x by y) and an option for PDF (and its size- perhaps rather than x by y but 'letter, legal, A4', etc) at the time when you create the subscription. By specifying the size then the image can become usable and by allowing PDF an attachment option can be provided as well.
