

Undo/Revert to Last change on the Server

I like the feature of Revert All on the Server when I want to go back to the Original State.

But can an Undo/Revert to the previous action/change be incorporated just like in the Desktop version. Most of the times, I have filtered out some data and then I exclude a value from the bar-chart but now i need to only revert the exclude to include that bar-chart value.

The single Undo/Revert button will definitely help.
