A New Action--Expand/collapse the hierarchy on one worksheet and have the same affect another worksheet on the same dashboard

We'd like to be able to expand/collapse one hierarchy of a worksheet and have this same action occur on another worksheet on the same dashboard. Maybe this can be added to the "Actions" function. I tried, only to discover I can only filter or highlight using an action. Adding hierarchy expand/collapse would help. In researching to see if anyone else had come up with a solution, I came across this user who had a very similar issue and question to mine: [http://community.tableausoftware.com/message/237772#237772](http://community.tableausoftware.com/message/237772#237772)

A Tableau moderator responded that this wasn't possible yet, but that we could put a suggestion in the ideas section.
