

# Multi-Select Filters: INTERSECTION instead of UNION

Folks have been struggling with this problem since 2011, and I don't find any viable solution.

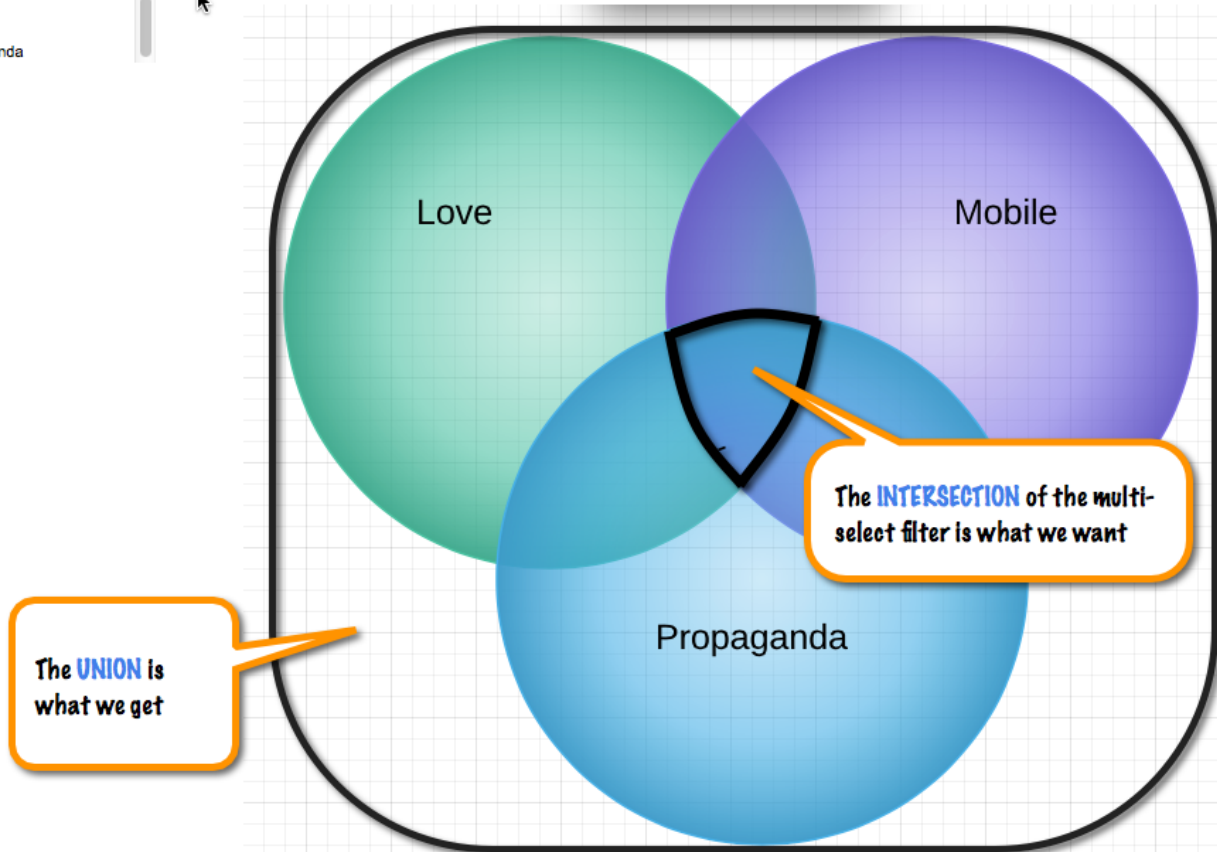

From a multi-select filter, sometimes the desired result should be the INTERSECTION of those values. At the moment, the filter only provides a superset ("any" / "or" / UNION) logic instead of the intersection ("and").

For example, with three keywords in the filter below:

Keyword(s)

 + 🔍

- love
- mobile
- propaganda

Thanks!
