

Support Right Join and Full Outer Join for Excel & Text in new connector (Released in 10.1)

The new Excel & text data source connector introduced in Tableau 8.2 does not support right joins nor full outer joins for Excel and text files, while the legacy Microsoft JET connector does at least support right joins. However, the JET connector is not available on Tableau for Mac, therefore requiring users on that platform to use some other means.

Note that this idea is different from [OUTER JOIN](#) which is asking for full outer joins for data blends.
