Hi!

When working on some Dashboards - especially the ones were I have multiple KPI's - I don't have any other way than creating multiple worksheets because not more than one can be used in the same Dashboard. However, what happens is that data is already available on that worksheet, but it's just in a different level of aggregation / different metric. In those cases, I need to keep track of dozens upon dozens of worksheets which makes it harder to create and maintain the Dashboard.

A simpler example is: If I have a worksheet by day but I also want to show the trend by year, I can't use the same worksheet.

This comes from a new user - loving the product so far. Great work!

Regards,

Ricardo Gamboa
