

Parameter Hierarchy

What

Please support multi-value and single-value hierarchical parameters.

Why

Well-organized parameter options reduce users' cognitive load.

Merging main and sub categories saves precious dashboard space.

When

First implement [multi-value parameters](#) and [dynamic population of parameters](#).

That said, it would be nice if this was introduced simultaneously with its precursors.

Inspiration

I have been aware of this being missing for some time. [Hongjun Liu's](#) question in [Do we have any way to create multi-level hierarchy?](#) encouraged me to post it and thus continue [my campaign of showing the value of good forum questions](#).
