

# Support Country Specific Fiscal Year

---

In Japan, the government's financial year runs from April to March. The fiscal year is represented by the calendar year in which the period begins.

On Tableau, if we change " Fiscal Year Start " to April, 2015/04-2016/03 become FY2016. But it should be " FY2015 " in Japan Market.

..... I know the workaround by using Table Calculation. but its limitation.....

Either duplicate or similar:
