

# Customize "Browse Periods" Quick Filter

---

The last topic I can find regarding this was posted in 2013 so I wanted to bring it up again. It seems that currently if you use the "Browse Periods" quick filter you are unable to change the preset selections (1d, 1w, 1m, 3m, 1y, 5y). It would be really cool if we could adjust these based on our needs, as some of the larger ranges are a little useless for some views.
