

Custom Color Palettes for Web Authoring

With the enhancements made to Workbook and Dashboard Web Authoring, I would like to be able to provide my organization with the color palettes in our Corporate Branding guide.

Without this capability, it is difficult to ask my less technical users to repeatedly find and enter the hex codes suggested in our Branding Guide. We should be making their lives easier in Web Authoring mode, not harder!

I would have hoped that there was a preferences file that I could change on the server, but my consultation with Tableau Support came up empty.

Please help make this idea come true!
