

# Option to prevent browser from opening when publishing to Tableau server

---

I would like the ability to prevent a published workbook from opening within a browser after publishing from Desktop to Server. I like to review my published work, but usually already have a browser open to the server and would like to be able to control the creation of new browser windows/tabs. A blanket on/off option would be great, and even better would be to have the ability to control this option at the workbook publishing level.

[Matthew Risley](#) suggested the area in the attached screenshot which seems appropriate.

### Publish Workbook to Tableau Server ✕
