

Support for SQL server 2016 "Always Encrypted"

Hi Tableau,

It would be nice if there is a support for SQL server 2016 "Always Encrypted" database. Currently there is no way to get decrypted data from these databases.

We need to upgrade our application to SQL server 2016 with "Always Encrypted" but lack of support from Tableau side is a major roadblock.

Can you please add this option in future release at earliest?

Regards,

Yogi
