Hi All,

Just a suggestion, perhaps we can get a way to publish or export worksheet or dashboard based on the colours of the tab.

For instance, i have 3 section in my workbook, first section is about Sales (red coloured tab), the second section is about Performances (blue coloured tab), and the third are all the test sheets/dashboard that i don't want to publish (yellow coloured tab).

Currently you have to scroll down a list when publish and select those that you need.

Imagine if you can just select and publish/export those that are red and blue tab only.

Wouldn't that speed things up slightly instead of going through a long list?

just a thought.

Thanks
