

# Autosave for Tableau Prep

---

## What is your idea?

Howdy, Tableau Program Managers. If you could plan and implement an "autosave" feature in Tableau Prep that would be swell.

## What problem are you trying to solve or what scenario would this idea solve?

I've found that Tableau Prep is still a bit unstable, and as a result I've lost quite a bit of work while working on flows. Autosave would at least allow an end user to recover some of their work. Populations around the world would rejoice should this feature be implemented.

## What workaround have you found and used so far (if any)?

Try to remind myself to [frequently] save.

## What is your role in your organization?

I'm a data analyst.
