

TABLEAU PREP: Append / Incremental Update from Data Source

Would be nice to see a feature added to Tableau Prep that allowed for an incremental update from the data source similar to what is available in Tableau Desktop. I know this can be achieved through some clever formulas and such but it shouldn't be so difficult. A dialog similar to the one attached would be nice to append an incremental update based on a defined field in the data source (such as date).

Extract Data ✕

Specify how much data to extract:

Filters (optional)

Filter	Details
