Adding keyboard shortcuts for Tableau Desktop

Let's add the functionality to be able to navigate true commands using shortcut keys.

For example, once you selected a calculation name, let's add a shortcut key so we do not have to right click using the mouse.

Also, let's add the ability for the user to do changes without using the mouse. (excel uses Alt + underlined letters, so the users can use functions using shortcuts).

I.e. ability to modify Page load/ change Data Type/ Date using the keyboard like ALT + C +D (alt + C for change + D for Date)

I am a Tableau Developer, it would save time and effort to have shortcuts through tableau to speed up processes.

Tableau is far superior to excel in so many ways, but it has a very "limited" number of shortcuts.

Adding more shortcuts is essential for a tableau user to produce work faster
