

Tableau Prep: Allow formula text to be copied, and/or allow duplication of calculated fields

It would be helpful to be able to copy the text of a formula in a calculated field when the same or similar logic needs to be applied to other fields, but copying text in calculated fields doesn't work for me (Prep 2018.3.3, OS X 10.13).

It would also be great to be able to duplicate a calculated field, this would resolve the issue of not being able to copy the formula text itself.

[20190731 - As of 2019.2.3 (though these features were introduced earlier) we can copy text in calculated fields and use it in Prep or have it on the clipboard for other text, and we can duplicate fields & calculated fields.]
